

Claims

1. A device for releasably mounting a bundle (30) of bags on a wall (2), said device comprising a wall-mounted suspension fitting (1), wherein one rear major surface of the bag bundle is connected to a sheet (40) which is parallel with said bundle and which is adapted for releasable co-action with the fitting (1), and wherein the bags (32) in said bundle are releasably (36) connected to said sheet at their respective opening regions, **characterized in that** the sheet has an opening (45) midway of its width; in that the fitting has an upwardly directed clip-finger (11) which includes in an upper portion of its side facing towards the wall (2) a projection (15) that can be received in the opening (45) in the sheet (40); and in that the projection (15) has two vertically separated oblique surfaces (16, 17) which are mutually convergent in a direction towards said wall for co-action with the upper and lower edges of the sheet opening.
2. A device according to claim 1, **characterized in that** the sheet (40) includes midway of its width a slot (43) which extends upwards from the lower edge (44) of the sheet and which has a horizontal width that is at least equally as large as the horizontal width of the projection (15) of the clip finger (15).
3. A device according to claim 1 or 2, **characterized in that** the lower end of the clip finger merges, via a web, with an upwardly directed clip leg (10) that is connectable to said wall (2).
4. A device according to claim 3, **characterized in that** the fitting is comprised of a springy, elastic strip-like element whose width corresponds to the width of the sheet opening (45) and the sheet slot (43) respectively.
5. A device according to claim 3-4, **characterized in that** the clip leg (10) carries on its outer surface discrete adhesive pads (20) for connection to the wall (2).
6. A device according to any one of claims 4-5, **characterized in that** the upper end portion of the clip finger is curved downwardly and inwardly the clip leg (10) such as to form the projection (15).
